

Fifth Central- and Eastern European Conference on
Computer Algebra- and Dynamic Geometry Systems
in Mathematics Education
26-29 September, 2014 Halle (Saale), Germany

Workshop

SKETCHOMETRY - DGS FOR TABLETS, SMARTPHONES AND INTERACTIVE WHITEBOARDS

Alfred Wassermann
Universität Bayreuth

Sketchometry is a Dynamic Geometry System (DGS) for the student in classroom. In contrast to many other DGS which are primarily used by teachers as a presentation tool, sketchometry tries to be a simple tool that invites students to experiment and discover. Sketchometry can be used on tablets, smartphones, interactive whiteboards as well as on desktop computers. The software has a touch-optimized user interface for easy sketching of geometric constructions. In the workshop we will discover sketchometry by creating various classroom examples.

Please, bring your own device: tablet, smartphone or notebook.
